        "reasoning": "The user asks: \"As an Automation Architect, use the instructions below.\" They provide strict instructions: generate ONLY Selenium Java code, with TestNG, Javadoc for class and methods, Selenium 2.30+ imports, meaningful method names, no explanations outside Javadoc, no comments besides Javadoc, use explicit waits only, no Thread.sleep, use locator strategies: ID only when unique and does NOT contain numbers; NAME only if ID not present and unique; XPath otherwise; never use CSS. Return only executable Java code, no markdown, no additional text.\n\nWe must produce Java code meeting those constraints.\n\nWe need a class with TestNG annotations, maybe a test that opens a page, interacts with some elements using appropriate locators (ID, NAME, XPath). Since we don't have context of specific site, we can create generic placeholders. But we must not include sample test data? They said \"do not include ... sample test data\". Probably we can use placeholder strings for URL etc. Should we include dummy data? Might be considered sample test data. However we need something to demonstrate usage. Could use \"http://example.com\". That's generic, but it's still test data. The instruction says \"Do not include explanations, comments outside Javadoc, or sample test data\". So maybe avoid including real data like URLs, credentials. Use placeholders like \"YOUR_URL_HERE\". That may be considered sample data but it's placeholder. Might be okay. Probably fine.\n\nWe need Javadoc for class and methods. No other comments.\n\nWe need imports compatible with Selenium 2.30+. That version is old; but we can use imports like org.openqa.selenium.WebDriver, org.openqa.selenium.WebElement, org.openqa.selenium.By, org.openqa.selenium.support.ui.WebDriverWait, org.openqa.selenium.support.ui.ExpectedConditions.\n\nTestNG imports: org.testng.annotations.BeforeClass, org.testng.annotations.AfterClass, org.testng.annotations.Test.\n\nWe'll create a class named SampleTest.\n\nWe'll have fields WebDriver driver; WebDriverWait wait.\n\nSetup method to initialize driver (maybe new

ChromeDriver) and wait.\n\nTest method that navigates to a URL, interacts with elements: find element by ID (if ID doesn't contain numbers). For demonstration, use ID \"loginButton\". That's letters. Use ID. Then maybe find by name \"username\". Then find by XPath for something else.\n\nBut we must obey rule: Use ID only when it's unique and does NOT contain numbers. So \"loginButton\" qualifies.\n\nUse NAME only if ID not present and unique. Use name \"username\". Good.\n\nUse XPath for others.\n\nWill use explicit wait for visibility/clickability.\n\nAdd Javadoc for class and each method.\n\nNo comments outside Javadoc.\n\nNo markdown. So just plain Java code.\n\nLet's craft.\n\nPotential code: \n\npublic class LoginTest { ... }\n\nWill need driver initialization; but need to set system property for driver path maybe.\n\nWe can include placeholder for driver path.\n\nOk. \n\nWrite code.\n\n"
